

Intelligent CCTV

Advanced PC-based, Internet accessible multi-camera security system to monitor and record activity at your business premises

STREETCAMERAS

StreetCameras is a unique security solution combining a remote burglar alarm, CCTV recording and real-time Internet monitoring into one powerful package.

WATCH YOUR PREMISES, WHEREVER YOU ARE

StreetCameras uses CCTV coupled with sophisticated software that detects movement, captures images, posts them to our secure web site and sends a customised text alert to a designated mobile phone.

WHY DO I NEED STREETCAMERAS?

CCTV cameras are everywhere these days because they provide improved security over alarm systems that are often ignored. However, traditional CCTV relies on videotape, which has to be constantly replaced, to provide evidence *after* an incident has occurred. This approach is too reactive to meet the needs of today.

STREETCAMERAS NOT CCTV

StreetCameras has brought CCTV technology up to date. It is a proactive solution, which takes advantage of advancements like the Internet and mobile phone messaging to give you immediate access to your premises and interactivity with your system. Better still, StreetCameras is a simple solution, easy to maintain and install, and much more affordable than traditional CCTV systems.

PROTECT, MONITOR, INTERACT

The potential uses for StreetCameras are limited only by your imagination:

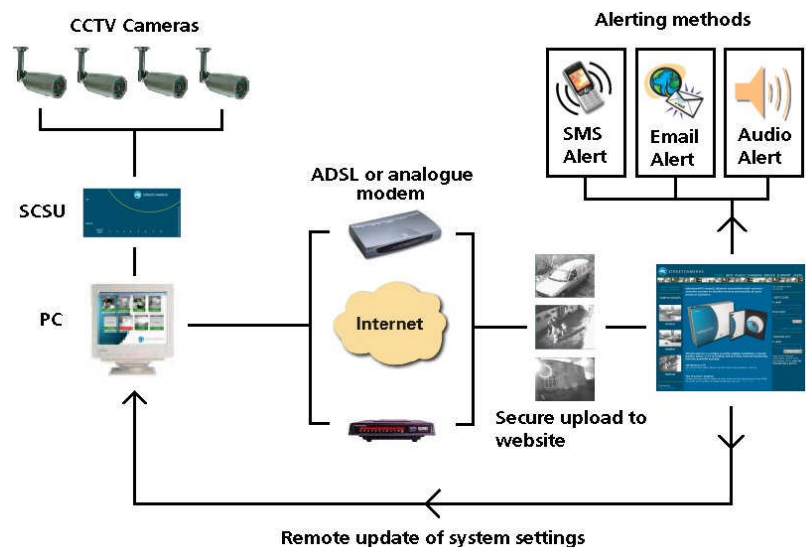

- Watch your premises while away
- Monitor particular assets and zones
- Configure the system to follow motion throughout your premises

HOW DOES STREETCAMERAS WORK?

Cameras interface with a local computer through a Switching Unit. Software compares sequential frames to detect movement, and delivers Email or SMS alerts to camera-specific addresses. Images are uploaded and stored on our password protected website.

FEATURES

- Images are saved locally to your PC and also published at intervals to our secure website (so you won't lose images in the that event your PC is stolen).
- Adjustable camera 'lingering' means that action can be followed – and recorded – from room to room.
- Saving to hard disk – not videotape - allows the system to work indefinitely without supervision.
- Configurable image sensitivity allows you to define levels of activity and detection within an image (you may for example want to block out moving traffic on a busy road).
- Users are provided with a secure login to view images from private cameras on our website.

StreetCameras' complete integrated security system:

UNIQUE HARDWARE

The StreetCameras Switching Unit (SCSU) powers up to eight cameras and interfaces with your PC.

INNOVATIVE SOFTWARE

At the heart of the StreetCameras system lies a powerful software package, incorporating a camera management and configuration module and an image playback movie-generator package.

Features include:

- Comprehensive image playback utility showing action within a chosen time frame
- SMS and Email alerts for each camera upon image detection
- Camera images divided into grid system for fine-tuning of motion sensitivity
- Configurable audio alarms
- Camera colour properties can be individually tuned

WEB INTERFACE

The real strength of the StreetCameras system is its range – the Internet brings your premises to you, anytime, anyplace. Simply log into our secure website from anywhere in the world to access interactive features including:

- View time delay and motion activated images from each camera for real-time access to your property
- Change system settings with remote configuration tools

StreetCameras has many advantages over traditional systems:

OUTDATED CCTV

- Uses hours of tape, recording nothing
- Playback is jumpy
- Stores on finite videotape that can be stolen along with property
- Relies on motion activated cameras
- Viewed only on premises
- Has no warning when incident occurring

STREETCAMERAS SOLUTION

- Records only whilst movement occurs
- Captures many frames per second for smooth playback
- Stores digital images on local PC and remotely on centralised secure server
- Intelligent system watches for and follows action across all cameras
- Remote access brings your premises to you anywhere, anytime
- Email or mobile phone alerts triggered by unexpected movement

System Requirements

MINIMUM

- Operating Systems: Windows 2000 / XP
- Processor: Intel Pentium III / AMD Athlon 800Mhz
- Memory: 128Mb
- Free HDD Space: 40Mb
- Video Card: 8Mb on-board, Direct X compatible
- Direct X: Version 9.0b
- Internet: Dial-Up connection
- TV Capture Card: Composite input/Direct X compatible
- Ports: 9 Pin RS232 Serial Port
- CD-Rom Drive

RECOMMENDED

- Operating Systems: Windows XP
- Processor: Intel Pentium IV / AMD Athlon 2.0Ghz
- Memory: 512Mb
- Free HDD Space: 40Mb
- Video Card: 16Mb on-board, Direct X compatible
- Direct X: Version 9.0b
- Internet: Broadband connection
- TV Capture Card: Hauppauge WinTV Express Card
- Sound Card: Direct X compatible
- Ports: 9 Pin RS232 Serial Port

Prices

StreetCameras Unit, dedicated PC, 4 cameras, 200m cabling and installation. £2,000 (approx)

Prices vary depending on types and numbers of cameras used, cabling runs and installation time. Full quotes available on request. All prices exclude VAT.
